

Please substitute the following ABSTRACT for the current ABSTRACT OF THE DISCLOSURE.

### **ABSTRACT OF THE DISCLOSURE**

A medical data recording method includes receiving medical data information in DICOM format through a software module and parsing patient identification information and study information from the received medical data information. The parsed patient identification information and parsed study information is stored. Print information for an autoloader control software has selected fields obtained from the stored parsed patient identification information and the stored parsed study information. DICOM images and other files are recorded on a recording media. The label is automatically printed using selected fields from the stored parsed patient identification information and the stored parsed study information on the recording media to label the recording media.
